3D/4D Ultrasound Appointments

You are scheduled for a 3D/4D ultrasound. At this time we would like to inform you of the capabilities of the ultrasound machine.

How far along should you be for a 3D/4D?

In order for the sonographer to be able to acquire the best images with the 3D/4D imaging you must be at least 28 weeks along. Before that gestational age the fetus' face may still appear more like that of a skeleton than of a baby. If you are under 25 weeks please discuss this with your provider or sonographer.

3D/4D Imaging

This ultrasound is for entertainment purposes only. This will consist of 15 minutes of scanning time. We will be focusing only on acquiring a cute picture for you and your family. If you have any concerns or problems with your pregnancy please speak with your physician or midwife.

Baby Position

If your baby is facing the wrong way, to be able to see the face, we will try to attempt to change the position of the baby by moving mommy or trying to wake baby up. There are times that the baby will not move and we are not able to image the face well at all. You will however still be able to get pictures of your baby.

Guests

You are welcome to bring guests into the ultrasound room. We reserve the right to excuse anyone from the ultrasound room if it is getting too distracting or crowded.

CD

We are able to offer you pictures of this ultrasound as well as a CD with images loaded onto it.

Payment

This ultrasound is \$150.00. You are required to pay this amount before the ultrasound can begin. There are times that we are not able to do the 3D/4D imaging. **You will not get a refund if we are unable to acquire the 3D/4D images.**

I have read and understand the information above, and my questions have been answered.
